
China supplier of home compostable packaging for 1kg coffee

Custom home compostable packaging for 1kg coffee bean

This is not an ordinary 1kg coffee bag, this is a 100% compostable coffee bag.

By the way, we produce coffee packaging, we don't sell coffee.

Coffee is one of the three major beverages in the world. Everyone knows that when the coffee is finished, the coffee bag is thrown away as garbage. Ordinary coffee bags are composites of paper and ordinary plastic, and the plastic in this bag takes almost a hundred years to degrade.

Now we have found a solution, that is fully biodegradable and compostable coffee bags, The bags are buried in the fertile soil and can be completely turned into fertilizer and absorbed by plants

The raw material of the whole bag comes from nature, returns to nature, and does not pollute the

environment.

The image below shows how compostable bags relate to nature.

The packaging bags made of compostable materials.

When the packaging bags are out of use, they can be degraded into fertile soil within a year and absorbed by plants. It's really come from nature and return to nature.

No more pollution to the environment. The world will become better and better.

Guangzhou Oemy Environmental Friendly Packaging Co.,Ltd, It is such a company that specializes in customizing fully biodegradable and home compostable flexible packaging for more than 5 years.

More pictures of compostable packaging for 1kg coffee bean

The special feature of the compostable packaging bags for 340g coffee bean that OEMY produce

- 1 . High quality kraft paper, fully compostable film, Each layer of material has a "Home compostable" certificate
- 2 . Easy zipper is also made of biodegradable materials, has biodegradable certification.
- 3 . Air valve are all made of biodegradable material. Each part is a degradable material, realizing that the whole bag is a real biodegradable bag
- 4 . Accurate text printing, correctly delivering advertising information
- 5 . Professional color printing without any overflow. These are the basic requirements of OEMY's professional and experienced printing masters
- 6 . OEMY's quality control of all raw materials, and professional operation in the bag making process, make the bags are with good tear resistance and durable

The Picture of biodegradable valve for the packaging bags

1. Could you see the difference between plastic air valve and biodegradable air valve?

Ordinary plastic air valves are pure transparent white and look beautiful, and they are indeed one of the plastics that pollute the environment.

The biodegradable valves are milky white, it doesn't look as transparent as the plastic valves, but they are indeed lovely valves that can degrade without polluting the environment.

In the pursuit of biodegradable coffee bags, OEMY company is serious

In the market, 99.9% of the air valves are made of PE plastic, and it takes 1000 years to completely degrade. It is a great harm to the environment. However, the PLA (polylactic acid)air valve is made of

plant material and can be degraded in the soil within 2-3 years. Become water and carbon dioxide absorbed by plants

It is technically difficult to make an air valve from polylactic acid . This technology is in the hands of a very small number of manufacturers, OEMY company is one of them.

Are you excited about such good biodegradable bags for your coffee? Welcome to contact with OEMY company

How OEMY help you to custom your coffee packagings?

1 . Custom packaging made of different materials combinations.

Choose the suitable material combination according to the needs of different products.

Paper: kraft paper, cotton paper, art paper, etc.

Biodegradable and compostable film: polylactic acid (pla), PBAT, ST, etc.
